Data Migration

Move forward with your data

Fear of losing data shouldn't define your decision to invest in software.

When organizations consider new solutions, one of the most important assets to consider is the data that already resides in your current system. GE Healthcare understands the importance of having both existing data and new data as part of your new software solution. Our industry-experienced engineers develop data continuity and migration strategies that provide better performance and functionality with a new database, helping to safeguard the integrity of your existing data.

SECURE DATA

Our team protects the security and integrity of your data in accordance with legal and industry standards.

EFFICIENT TRANSFER

Leveraging Lean Six Sigma processes, our engineers limit the disruption to active applications through a smooth transfer process, regardless of size and scope.

EFFECTIVE INTEGRATION

Whether your data resides on GE equipment or other platforms, our team has the expertise to successfully integrate multiple databases.

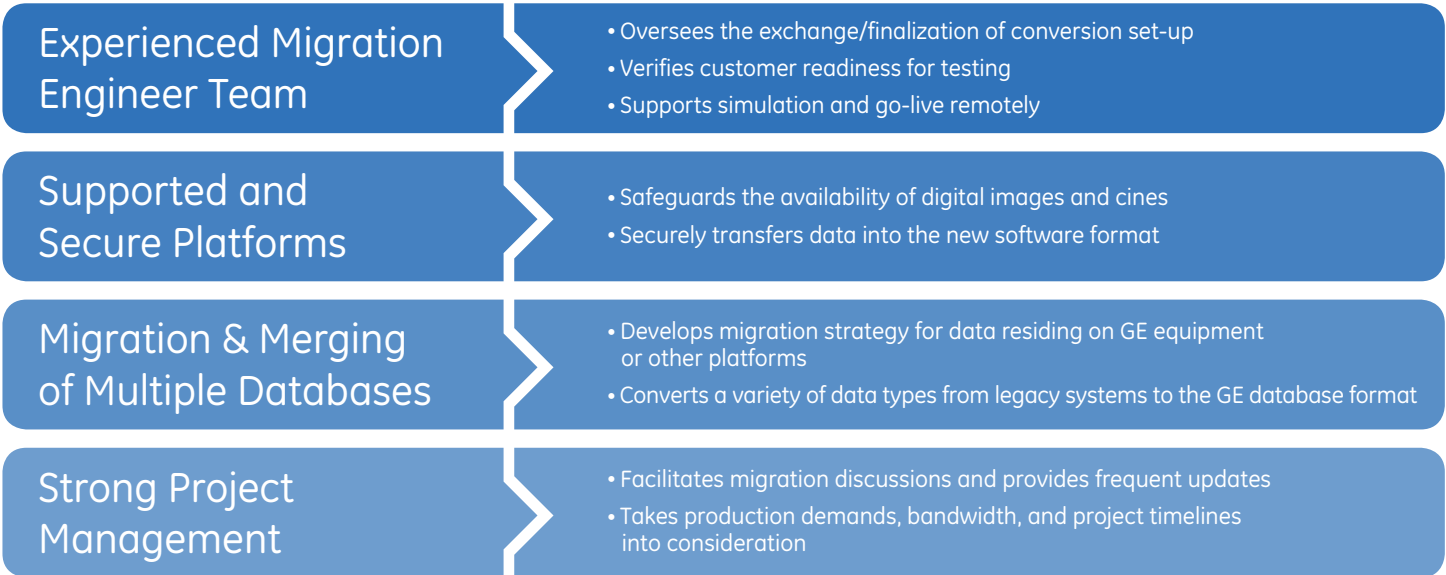

Data Migration by GE Healthcare IT Services has one primary objective: securely integrate your data through an efficient process. Our team has been performing data migrations for decades so we understand the importance of data continuity as you move forward with your new solution. We have the knowledge and expertise to smoothly and securely transfer data in accordance with your specific needs and applicable legal and industry standards. Whether you are a physician practice or a multi-community healthcare system, services can be scaled to fit your needs.

- GE Healthcare's IT Services completes more than 300 data migration projects each year
- 80 percent of customers were highly satisfied with our team's knowledge, communication, and professionalism¹

KEY PERFORMANCE INDICATORS

Based on a structured methodology, Eligibility Workflow Optimization includes focused system design and setup, monthly performance reviews, workouts focused on your organization's KPIs as well as targeted action plans to help drive down eligibility related denials, improve efficiency, and maintain line of sight into your top issues.

Data Migration can have a direct, positive impact on the overall integrity of your data. For example, when disparate systems are integrated, duplicate services can be eliminated, which improves efficiency and reduces cost. The following quote from a hospital CEO highlights this potential:

“I used to do a lot of work in figuring out what providers were ordering in Centricity™ and where the orders were going. The hospital I used to work at did a server migration where they combined a bunch of servers into a single server. After this, they noticed that their lab referrals had dropped by about 2,000 because there were duplicates in the system. Patients would go to their primary care provider, who would order a lab. The patients would then go to a specialist, who would order the same lab. When the hospital combined the system and got rid of all of the duplicates, the lab volume suddenly went down significantly.”

Hospital CEO
